DETAILED ACTION

Status of the Application

Claims 1-13 are pending.

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, drawn to a polypeptide comprising the amino acid sequences of SEQ ID NO: 1-5 and 6, classified in class 435, subclass 183.
 - II. Claims 11-13, drawn to a polynucleotide encoding a polypeptide comprising the amino acid sequences of SEQ ID NO: 1-5 and 6, classified in class 536, subclass 23.2.

The inventions are distinct, each from the other because of the following reasons:

2. Groups I-II each comprise a chemically unrelated structure capable of separate manufacture, use, and effect. The nucleic acid of Group II comprises purine and pyrimidine units, and the protein of Group I comprises amino acids, thus being structurally distinct molecules. The nucleic acid of Group II has other uses besides encoding the protein of Group I, such as a hybridization probe or in gene therapy. Further, the protein of Group I can be prepared by processes which are materially different from recombinant expression of the nucleic acid of Group II, such as by chemical synthesis, or by isolation and purification from natural sources.
3. As set forth in MPEP § 803, the criteria for a proper restriction between patentably distinct inventions requires that the inventions must be independent or distinct as claimed, and a search of all the inventions would impose a serious burden on the examiner. Groups I-II have been shown to be independent or distinct, for the reasons set forth above. MPEP § 803 also indicates that a serious burden on the examiner may be prima facie shown if the Examiner shows by appropriate explanation either separate classification, separate status in the art, or a different field of search. The inventions of Groups I-

Art Unit: 1652

II have acquired a separate status in the art because of their recognized divergent subject matter, as shown by their different classification. In addition, a search of all the inventions would require at a minimum a separate patented/non-patented literature search and a class/subclass search. These searches are not all co-extensive. Therefore a comprehensive examination of all groups would impose an undue burden on the Examiner. Thus, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement can be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

6. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system.
